

Phase 3 – UI/UX Development & Customization:

Objective:

The primary objective of Phase 3 is to design and deliver an intuitive, responsive, and consumer-grade self-service user experience within the ServiceNow Service Portal (/sp).

This phase focuses on:

- Creating the client-facing Service Catalog Item (Network Request) organized under the ITSM category taxonomy.
- Structuring the intake form using 7 purpose-built variables for technical, billing, and contact specifications.
- Developing a reusable, modular Variable Set (Requester Information) that leverages dot-walking to auto-populate user profile details (User Name, Email, Phone Number) without manual entry.
- Implementing dynamic client-side logic using a Catalog UI Policy (visible/hide of ID field) to conditionally show or hide connection ID fields based on user selection.

Interface Design: Service Catalog Item

- Catalog Item Name: Request
- Catalogs: Service Catalog
- Category: Network Standard Changes
- Application Scope: Global
- Active: true
- Short Description: Network request Management
- Description: Self-service submission form for ordering new network connections, modifying existing setups, and managing billing details.
- Portal Settings:
 - Request Method: Order / Submit
 - Availability: Desktop and Mobile

Form Variables Architecture:

Variable Question (Label)	Variable Name	Type	Order	Mandatory	Choices / Values
Requested For	requested_for	Single Line Text	100	No	Default / Enter Name
Mobile Number	mobile_number	Single Line Text	200	Yes	Example: 9090909090
Type of Connection	type_of_connection	Multiple Choice	300	Yes	New (value: new) Existing (value: existing)
Enter your existing Id	enter_your_existing_id	Single Line Text	400	Dynamic	Example: REQ-1092
Total Amount	total_amount	Single Line Text	500	Yes	Example: 800
Mode of Payment	mode_of_payment	Multiple Choice	600	Yes	UPI (value: upi) CARD (value: card)
Address	address	Multi Line Text	700	Yes	Multi-line text

Modular Variable Set (Requester Information):

Variable Set Properties

- Title: Requester Information
- Internal Name: requester_information
- Order: 50
- Type: Single Row
- Display Title: Checked (true)
- Layout: 2 Columns Wide, one side, then the other

Auto-Population Configuration:

Left Column	Right Column
[Opened on behalf of] (Reference: sys_user)	[Email ID] (Auto-populated from User)
[User Name] (Auto-populated from User)	[Phone Number] (Auto-populated from User)

1. **opened_on_behalf_of** (Order: 100):
 - Type: Reference → Table: User [sys_user]
 - Default Value: javascript:gs.getUserID()
2. **email** (Order: 200):
 - Type: Single Line Text
 - Auto-populate: Dependent on opened_on_behalf_of → Dot-walk: Email
3. **user_name** (Order: 300):
 - Type: Single Line Text
 - Auto-populate: Dependent on opened_on_behalf_of → Dot-walk: User ID
4. **phone_number** (Order: 400):
 - Type: Single Line Text
 - Auto-populate: Dependent on opened_on_behalf_of → Dot-walk: Phone

Catalog UI Policy (Dynamic Field Visibility):

Policy Definition:

- Policy Name / Short Description: visible/hide of ID field
- Applies to: A Catalog Item
- Catalog Item: Request

- Active: true
- Applies on a Catalog Item view: Checked (true)
- Applies on Catalog Tasks: Checked (true)
- On Load: Checked (true)
- Reverse if False: Checked (true)

Condition Logic:

- Catalog Condition: Type of Connection is Existing

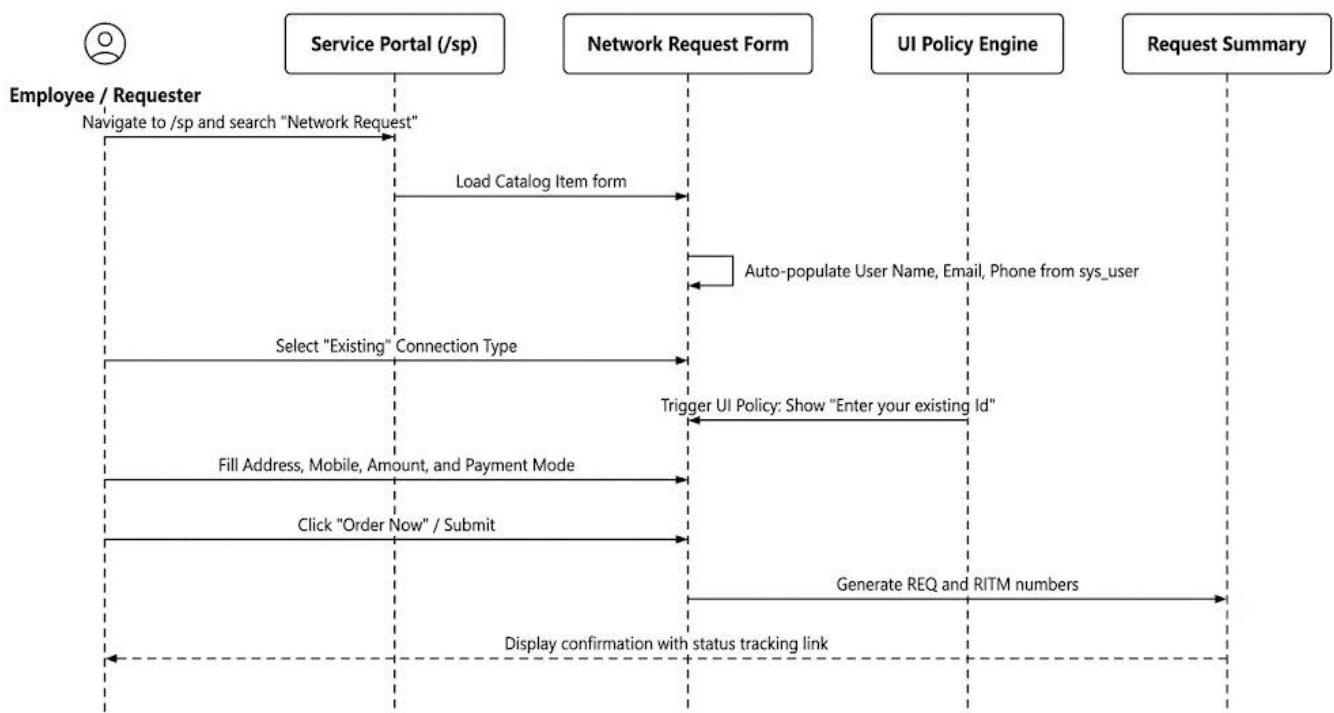

Catalog UI Policy Action:

- Variable Name: enter_your_existing_id
- Order: 100
- Visible: True
- Mandatory: Leave alone (*or True*)

Runtime Behavior:

- If the user selects "New", the field Enter your existing Id is automatically hidden.
- If the user selects "Existing", the field Enter your existing Id dynamically appears on the form.

Navigation Flow (Service Portal User Journey):

Test Verification & Results

Test ID	Test Scenario	Steps / Input Data	Expected Result	Actual Result	Status
1	Item Accessibility	Search "Network Request" on /sp	Catalog item displays with description and category	Item found and opens	PASS
2	Requester Auto-Populate	Open form as authenticated user	Email, User Name, and Phone auto-fill from sys_user	All 3 fields populated instantly	PASS
3	UI Policy (Hide Field)	Select Type of Connection = New	Enter your existing Id field remains hidden	Field completely hidden	PASS
4	UI Policy (Show Field)	Select Type of Connection = Existing	Enter your existing Id dynamically displays	Field appears immediately	PASS
5	Mandatory Validation	Submit form leaving required fields empty	Form blocks submission with inline alerts	Required field warnings displayed	PASS
6	End-to-End Submission	Complete all required fields → Click Order Now	Generates Request Number (REQ0010043)	Request created successfully	PASS
