

Phase 5 – Deployment, Documentation & Final Presentation:

Objective:

The primary objective of Phase 5 is to prepare the Automated Network Request Management System for enterprise deployment, deliver exhaustive technical and functional documentation, structure a role-based demonstration video, and define a scalable future roadmap.

This phase encompasses:

- **Production Packaging:** Reviewing, completing, and exporting the dedicated ServiceNow Update Set (.xml) for seamless cross-instance deployment.
- **Comprehensive Evaluation Documentation:** Providing detailed technical and architectural analysis across all 11 rubric criteria (a through k).
- **Demonstration Storyboard:** Planning a 3-minute, role-based walkthrough covering requester, approver, and fulfiller perspectives.
- **Scalability Roadmap:** Formulating architectural enhancements including Integration Hub orchestration, automated network device provisioning, and executive analytics.

Production Deployment & Update Set Packaging:

Update Set Verification Checklist

Component Category	Captured Technical Artifacts
Data Model	Custom Table (u_request_management), 9 Dictionary columns, Form Sections, 2-Column Form Layout.
System Relationships	sys_relationship record (Approval Request) joining u_request_management and sysapproval_approver.
Service Catalog	Catalog Item (Network Request), Category linkage, 7 Variables, Choices (new/existing, upi/card).
Variable Sets	Single-Row Variable Set (Requester Information), 4 child variables with auto-populate dot-walking.
Client-Side Logic	Catalog UI Policy (visible/hide of ID field) and Catalog UI Policy Action (enter_your_existing_id).
Workflow Automation	Flow Designer Flow (Request Flow), trigger, 8 flow actions, pill mappings, and email templates.
Security	4 Table-level Access Control Lists (ACLs: Create, Read, Write, Delete).

Export Procedure:

1. Navigate to **System Update Sets > Local Update Sets**.
2. Open Auto_Network_Request_Mgmt.
3. Change **State** from In progress to **Complete**.
4. Click **Save**.
5. Under Related Links, click **Export to XML**.
6. Store the exported XML file in the project repository (update-set/Auto_Network_Request_Mgmt.xml).
